BALAJI BALARAMAN

DevOps / DevSecOps Engineer

Chennai, India | +91 6379742621 | balajiinfo2202@gmail.com | LinkedIn | Portfolio

PROFESSIONAL SUMMARY

DevOps / DevSecOps Engineer with 3 years of experience designing, automating, deploying, and securing cloud-native applications across Azure, AWS, and GCP. Proven expertise in CI/CD pipeline development, container orchestration (Kubernetes/Docker), infrastructure as code (Terraform), cloud security hardening, and full-stack observability. Demonstrated track record delivering enterprise-grade fintech and AI-driven platforms with high reliability, scalability, and compliance standards.

CORE TECHNICAL SKILLS

CI/CD & DevOps	Jenkins (multi-server, multibranch), GitHub Actions, Azure DevOps, Nexus, SonarQube, Git, Bitbucket
Cloud — Azure	AKS, Azure Container Apps, ACR, Key Vault, PostgreSQL Flexible Server, Data Factory, Event Grid, Front Door, Application Insights, AI Foundry
Cloud — AWS	EC2, ECS, Lambda, EventBridge, SNS, API Gateway, ELB, NLB, IAM, S3, CloudWatch
Containers & IaC	Docker, Kubernetes (AKS / EKS), Docker Swarm, Docker Compose, Podman, Terraform (Intermediate), Ansible (Learning)
Monitoring & Logging	ELK Stack (Filebeat, Metricbeat, Heartbeat), Prometheus, Grafana, Loki, Dynatrace, Datadog, Azure Application Insights, Cloudwatch
Security & DevSecOps	Snyk, Trivy, Grype, Vulnerability Management, OS Patching, Configuration Hardening, Compliance Validation, Least-Privilege IAM
Scripting & OS	Shell Scripting, Linux Administration, Python, Java, Groovy
Web & Networking	Nginx, SSL/TLS, Reverse Proxy, VPN, Private Subnets, Kubernetes Ingress, API Gateway

PROFESSIONAL EXPERIENCE

DevOps / DevSecOps Engineer | Zuci Systems India Pvt. Ltd. | *Aug 2023 – Present*

- Designed and maintained CI/CD pipelines using Jenkins (multi-server, multibranch) and GitHub Actions for multi-environment deployments across Azure and AWS, reducing release cycle times.
- Deployed and managed containerized microservices using Docker, Kubernetes (AKS), and Docker Swarm across IaaS, PaaS, and Kubernetes platforms for enterprise clients.
- Automated cloud infrastructure provisioning using Terraform, standardizing repeatable deployment workflows and improving environment consistency.
- Led DevSecOps remediation initiatives including vulnerability management (Snyk, Trivy, Grype), OS patching, configuration hardening, and compliance validation across cloud environments.
- Implemented centralized monitoring and observability stacks using ELK Stack (Filebeat, Metricbeat, Heartbeat), Prometheus, Grafana, Loki, and Azure Application Insights.
- Supported and stabilized production releases ensuring security, high availability, and regulatory compliance requirements were consistently met.

Intern — Java & Cloud | Zuci Systems India Pvt. Ltd. | *Dec 2022 – Jul 2023*

- Completed hands-on training in Java fundamentals, Linux administration, and cloud computing basics.
- Assisted DevOps teams with CI/CD task execution, application deployments, environment setup, and incident troubleshooting.

KEY CLIENT PROJECTS

Northern Arc — Financial Services Platform — *Azure · Jenkins · Docker · Kubernetes · ELK Stack*

Northern Arc is a leading Indian NBFC enablement platform connecting lenders and borrowers across the credit ecosystem. The project involved building and securing a high-volume fintech infrastructure supporting multiple client lending applications.

- Built and maintained Jenkins multi-server CI/CD pipelines for microservice build, Docker image creation, and multi-environment deployments.
- Containerized and deployed microservices using Docker, Docker Swarm, and Kubernetes with Nginx reverse proxy and SSL termination.
- Configured Azure Virtual Network, private subnets, and secure networking for high-compliance fintech workloads (Paytm, MoneyView, loan disbursement platforms).
- Implemented centralized logging and alerting with ELK Stack (Filebeat, Metricbeat, Heartbeat) for container health, system metrics, and uptime monitoring.
- Performed Azure VM security hardening, vulnerability remediation, and OS patching to meet financial compliance requirements.

Borderless Access — Agentic AI Platform — *Azure · AKS · Azure Container Apps · Prometheus · Grafana · Loki*

Borderless Access is a global market research and data intelligence company building an AI-driven platform for automated research workflows. The project required a secure, scalable Azure infrastructure to support GPU-intensive Agentic AI and ML workloads in production.

- Delivered end-to-end Azure DevOps implementation using AKS and Azure Container Apps for production AI/ML workloads.
- Provisioned and managed GPU-enabled AKS node pools to support Agentic AI and ML inferencing workloads at scale.
- Integrated Azure services: ACR, Key Vault, PostgreSQL Flexible Server, Data Factory, Event Grid, and AI Foundry for a secure AI platform.
- Designed secure networking architecture using VPN integration, private subnets, API Gateway, Azure Front Door, and Kubernetes Ingress.
- Implemented Loki sidecar logging containers and Prometheus + Grafana dashboards for cluster-level and application-level observability.
- Enforced cloud security best practices including private endpoints, least-privilege IAM, and network segmentation.

Mariner Finance — Enterprise Financial Application — *AWS · EC2 · ECS · Jenkins · GitHub Actions · Lambda*

Mariner Finance is a US-based consumer lending company offering personal loans and financial products. The project focused on migrating and stabilizing a cloud-native microservices architecture on AWS with strong DevSecOps and compliance requirements.

- Managed EC2-based Docker microservices deployments and ECS cluster-based container orchestration for an enterprise financial platform.
- Built CI/CD pipelines using Jenkins and GitHub Actions supporting automated testing, security scanning, and multi-environment deployments.
- Implemented event-driven architecture using AWS Lambda, EventBridge, and SNS for asynchronous financial processing workflows.
- Configured API Gateway, ELB, and NLB for intelligent traffic management, load balancing, and high availability.
- Managed AMI creation, EBS volumes, snapshots, and backup strategies to ensure business continuity and disaster recovery.
- Executed OS upgrades, security patching, and DevSecOps vulnerability remediation, validated using AWS CLI and security scan re-validation.

CERTIFICATIONS

Azure DevOps Engineer Expert (AZ-400)	Microsoft	*Valid till Nov 2026*
HashiCorp Terraform Associate (003)	HashiCorp	*Valid till Nov 2027*
Azure Developer Associate (AZ-204)	Microsoft	*Valid till Mar 2026*
